

How to enable two-factor authentication in your Global Next Trade portal

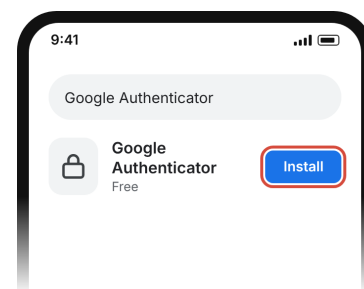

It is an additional security measure to protect your account. You can do it from your computer or directly from your mobile phone; in both cases you will use the **Google Authenticator** app on your phone.

Before you start

Download the **Google Authenticator** app on your mobile phone. You can find it in the **App Store** (iPhone) or **Google Play** (Android), and it is free.

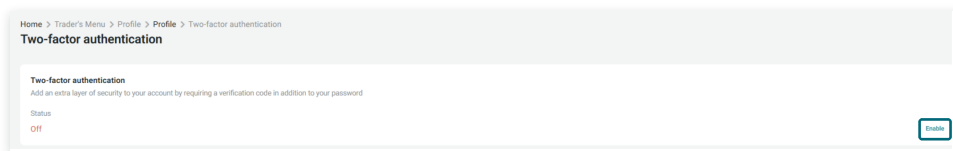

Install it before you continue: you will use it during the process.

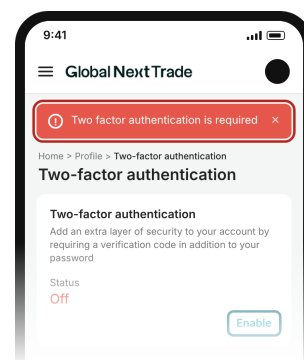

1 Log in to the GNT portal

Log in with your email and password, from your computer or your mobile phone. When you log in, you will see a **red notice**: you need to enable two-factor authentication. Click **Enable**.

On your computer

On your mobile phone

2 Link your account to Google Authenticator

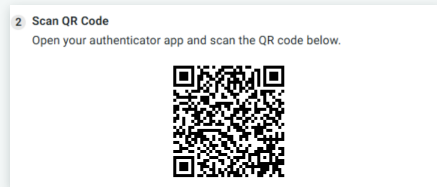

The procedure depends on where you logged in. On the next page, choose your case:

A · You logged in on your **computer** → scan the QR code with your phone.

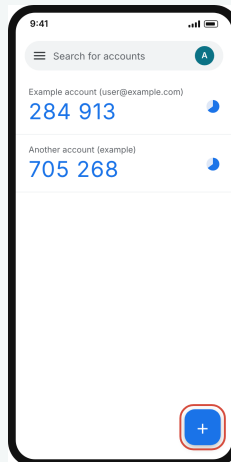

B · You logged in on your **mobile phone** → copy the key and paste it into Google Authenticator.

2 Link your account to Google Authenticator

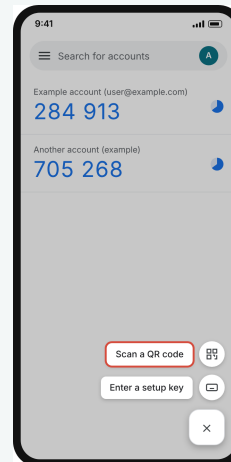

A · If you logged in on your computer: scan the QR code

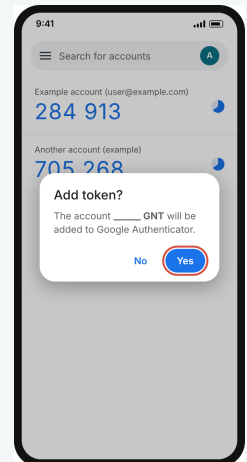

- a A **QR code** will appear on your computer screen.

- b Open **Google Authenticator** on your phone and tap the **+** button.

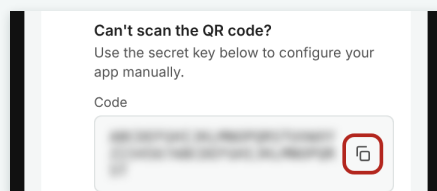

- c Choose **Scan a QR code** and point the camera at the code on the screen.

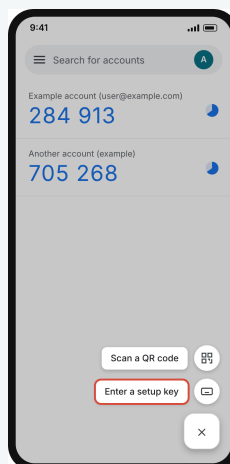

- d When the message **Add token** _____ **GNT** appears, tap **Yes**.

B · If you logged in on your mobile phone: copy the key

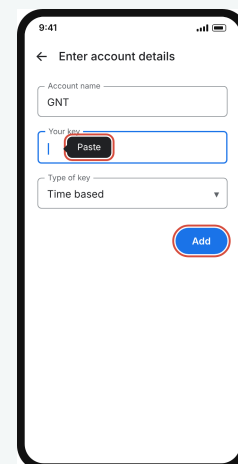

- a Below the QR code you will see a **key**. Tap the **copy icon** next to it.

This option also works on a computer if you cannot scan the QR code: type the key in Google Authenticator.

- b Open **Google Authenticator**, tap **+** and choose **Enter a setup key**.

- c In **Account name**, type **GNT**. Press and hold in **Your key** and choose **Paste**. Leave **Time based** as it is and tap **Add**.

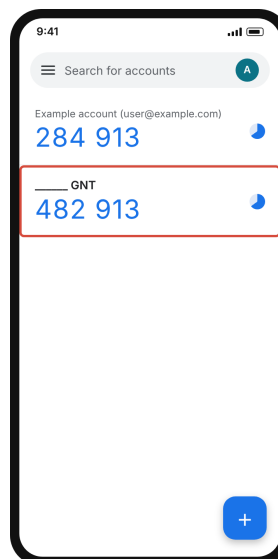

3 Enter the code in the GNT portal

In Google Authenticator, below _____ GNT, you will see a **6-digit code**.

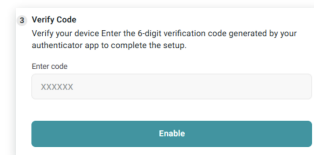

Type it into your GNT session, in the **Enter code** box, and click **Enable**.

On your mobile phone: go back to the browser where your GNT session is open to enter the code.

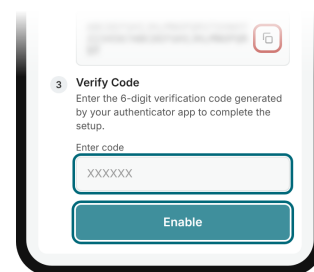

Important: enter the code as soon as you see it, because it has a time limit. If it expires before you finish the process, **you have to send an email to clientservices@gntcapital.com** requesting to reset this step.

On your computer

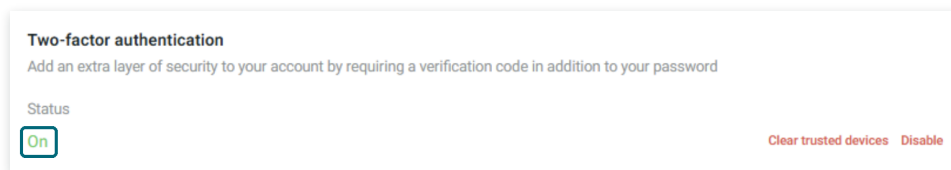

On your mobile phone

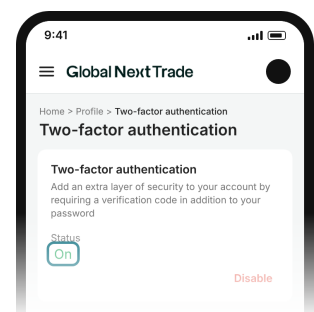

4 Done

Two-factor authentication is now enabled. In your portal, the status will appear in green: **On**.
